Patent No. 5942398

GENERAL INFORMATION:
APPLICANT: Tartaglia, Louis A.
TITLE OF INVENTION:
TITLE OF INVENTION: ENCODING GLUTEX AND USES THEREOF
ITTLE OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 225 Franklin Street MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: Windows95
SOFTWARE: FastSED for Windows Version 2.0
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/031,392
FILING DATE: 26-FBS-1998
ATTORNEY AGENT INFORMATION:
NAME: Mekklejohn, Ph.D., Anita L.
REGISTATION NUMBER: 35,283
REFERENCE/POCKET NUMBER: 35,283
TELECOMMUNICATION INFORMATION: TELEX: 200154
INFORMATION FOR SEQ ID NO: 6:

MOLECULE TYPE: protein US-09-031-392-7 TYPE: amino acid TOPOLOGY: linear

APPLICANT: Tarteglia, Louis A.
APPLICANT: Weng, Xun
TITLE OF INVENTION: NUCLEIC ACID MOLECULES
TITLE OF INVENTION: BNCODING GLUTEX AND USES THEREOF
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESSEE: Fish & Richardson P.C.
STREET: 225 Franklin Street

CITY: Boston

; Sequence 7, Application US/09031392; Patent No. 5942398; GENERAL INFORMATION:

Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.

Example 4; SEQ ID NO 2675; 10078pp; English.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAV38642-AAW42213) with nootropic, encoded polypeptides (AAV38642-AAW42213) with nootropic, in gene therapy. A composition containing a polypeptide or polyucleotide in gene therapy. A composition containing a polypeptide or polyucleotide or polymeral nervous containing a polypeptide or polyucleotide or polymeral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system disease, amyotrophic contains and shrington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syddrome. Other uses include the lateral sclerosis, and Shy-Drager Syddrome. Other uses include the continity inhibin activity, chemctactic/chemckinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, architis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form of part of the printed specification

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopoletic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV protein of the invention. ö 196 IRGSLGQVTAIFICIGVFTGQLLGLPELLGKESTWPYLFGVIVVPAVVQLLSLPFLPDSP, 256 316 190 VYTVIVTMACYQLCGLNAIWFYTNSIFGKAGIPPAKIPYVTLSTGGIETLAAVFSGLVIE 376 436 496 ö New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer. 70 ä 137 RKHTLLANNGFAISAALLMACSLQAGAFEMLIVGRFIMGIDGGVALSVLPMYLSEISPKE LIGEFFQQSQRPAAFIIAGTVNWLSNFAVGLLFPFIQKSLDTYCFLVFATICITGAIYLY 11 RKHTLLANNGFAISAALIMACSLQAGAFEMLIVGRFIMGIDGGVALSVLPWYLSEISPKE RYLLLEKHNEARAVKAFOTFLGKADVSQEVEEVLAESHVQRSIRLVSVLELLRAPYVRWQ HLGRRPLLIGGFGLMGLFFGTLTITLTLQDHAPWVPYLSIVGILAIIASFCSGPGGIPFI Gaps Gorman 8 ; 0 Anderson DW, Berghs C, Boldog FL, Burgess CE, Casman SJ; Catterton E, Edinger S, Eisen AJ, Ellerman K, Gerlach V, Guo X, Jeffers M, Kekuda K, Li L, Malyankar UM, Miller CE Padigaru M, Patturajan M, Pena CEA, Rastelli L, Shenoy S, Shimkets RA, Spaderna SK, Spytek KA, Stone DJ, Taupier RJ; Vernet CAM, Voss EZ, Zhong M; Length 422; Indels / Match

02-JUL-2002;

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, infinibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy. Ë Gorman Anderson DW, Berghs C, Boldog FL, Burgess CE, Casman SJ; Catterton E, Edinger S, Eisen AJ, Ellerman K, Gerlach V, Gc Guo X, Jeffers M, Rekuda R, Li L, Malyankar UM, Miller CE; Padigaru M, Petturajan M, Pena CEA, Rastelli L, Shenoy S; Shimkets RA, Spaderna SK, Spytek KA, Stone DJ, Taupier RJ; Vernet CAM, Voss EZ, Zhong M; New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopoietic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV protein of the invention.

```
The present invention describes an isolated human transporter protein (I) related to the sugar transporter family. The gene encoding (I) is located to human chromosome 1. (I) has immunostimulant activity and can be used in gene therapy. (I) is useful for identifying a modulator of the expression of the protein. (I) is also useful for identifying an agent that binds to the protein. (I) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic
                                                                                                                                                   360
                                                                                                                                                                                                     420

proteins and serve as targets for the development of human therapeutic agents that modulate transporter activity in cells and tissues that express the transporter. (I) can further be used as a query sequence to perform a search against sequence databases to identify other family members or related sequences. Transporter proteins provide a target for diagnosing a disease or prediagnostion to a disease mediated by the protein, in pharmacogenomic analysis and for treating disorders characterised by an absence of inappropriate, or unwanted expression of the protein. The present sequence represents a human solute carrier family 2 (facilitated glucose transporter) member 9 protein, which is given in comparison with the human transporter protein in the exemplification of the present invention

cardiac disease (angina, hypertension, or bradyarrythmia) and in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of transporters and ion channels. The polynucleotides may be used to detect and quantify gene expression in biopsied tissues in which TRICH expression may be correlated with a disease, to generate hybridization probes for mapping naturally occurring genomic sequence, and in drug screening. The present sequence is human TRICH-25 protein. 888888888888

or New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.

Claim 2; SEQ ID NO 76; 478pp; English.

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopotatic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV protein of the invention.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, concoded polypeptides (AAM38642-AAM42213) with nootropic, concoded polypeptides are useful concompaning a polymediocide are useful in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as localised neuropathies and central nervous system diseases, amyotrophic alteral sclerosis, and Shy-Drager Syndrome. Other uses include the lateral sclerosis, and Shy-Drager Syndrome. Other uses include the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

New human transporters and ion channels (TRICH) polypeptides useful for diagnosing, treating or preventing disorders associated with aberrant expression of TRICH.

Claim 1; Page 182-184; 210pp; English.

The invention relates to human transporters and ion channels (TRICH) polypeptides and their cDNA molecules. The nucleic acid and polypeptide sequences are useful in the diagnosis, treatment, and prevention of disorders associated with transport (akinesia, vestic fibrosis, Bell's palsy, amyotrophic lateral sclerosis); neurological (Alzheimer's disease, amnesia, dementia); muscle (cardiomyopathy, myocarditis, Duchenne's muscular dystrophy); immunological (AlDS, Addison's disease, allergies, asthma); cell proliferative disorders (cancers, leukaemia, psoriasis);

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymetides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, incorr, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.

Claim 20; Page 275; 1963pp; English.

Sequences ABB10881-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the

polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; including cytokine, cell proliferation or cell communomodulatory activity; tissue growth activity; inwention activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; raceptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic acids enrocaling them, may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, hamunomodulatory activities may be used in to immune disorders to promote cell growth. For example, such polypeptides may be used to promote cell growth. For example, such polypeptides may be used in cell coll cells that the treatment of viral control to mental collines. that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention \$

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying compounds that modulate the activity of glucose transporter (GLUTX). The compound identified is useful in the diagnosis and treatment of disorders associated with GLUTX activity and aberrant hexose transport. The present sequence is human GLUTX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying compound modulating activity of glucose transporter, useful for treating disorders mediated by transporter, comprises contacting polypeptide with test compound and comparing activity in presence and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LAGAFGSSFLYGYNLSVVNAPTPYIKAFYNESWERRHGRPIDPDTITLLWSVTVSIFAIG

AAB30521 standard; protein; 563

AAB3052:

AAB30521;

novel mammalian transporter protein and the gene encoding it, are seful in the diagnosis and treatment of disorders associated with aberrant sugar transport.

Claim 1; Fig 2A-D; 48pp; English.

acids This represents a human glucose transporter (GLUTX) protein. The protein can be expressed by standard recombinant methodology. GLUTX nucleic acids are useful as hybridization probes for detecting the presence of GLUTX bind in a sample, useful for diagnosing conditions associated with aberrant expression levels of GLUTX. The GLUTX gene is also useful as a therapeutic agent for regulating translation of GLUTX mind, and for treatment of disorders associated with aberrant expression of GLUTX and aberrant hexose transport. It is useful for generating GLUTX specific antibodies, identifying agonists and antagonists of GLUTX, and identifying nucleic acids in other species encoding nucleic acids homologous to GLUTX uncleic acids are also useful for identifying the chromosomal location of GLUTX, and as tissue specific markers

Tartaglia LA; Weng X,

WPI; 2001-040236/05. N-PSDB; AAC62143. New human glucose transporter protein and nucleic acid encoding the protein, useful in the diagnosis and treatment of disorders associated with aberrant hexose transport.

Claim 1; Fig 2A-D; 48pp; English.

The present sequence represents a human GLUTX polypeptide. GLUTX is a glucose transporter protein. The GLUTX polypeptides and polynucleotides are useful in the diagnosis and treatment of disorders associated with aberrant hexose transport. The GLUTX polypeptide is useful for expression of GLUTX or activity of GLUTX. The nucleic acid molecule and the GLUTX polypeptide are useful as diagnostic or therapeutic agents, or they can be used to generate antibodies or identify small molecules that in turn are clinically useful. The GLUTX nucleic acid molecules are useful for identifying the chromosomal location of GLUTX and as tissue-

novel mammalian transporter protein and the gene encoding it, are seful in the diagnosis and treatment of disorders associated with aberrant sugar transport.

Claim 1; Fig 2A-D; 48pp; English

This represents a human glucose transporter (GLUTX) protein. The protein can be expressed by standard recombinant methodology. GLUTX nucleic acids are useful as hybridization probes for detecting the presence of GLUTX DNA in a sample, useful for diagnosing conditions associated with aberrant expression levels of GLUTX. The GLUTX gene is also useful as a therapeutic agent for regulating translation of GLUTX manh, and for treatment of disorders associated with aberrant expression of GLUTX and aberrant hexose transport. It is useful for generating GLUTX specific antibodies, identifying agonists and antagonists of GLUTX, and identifying nucleic acids in other species encoding nucleic acids homologous to GLUTX GLUTX, and as tissue specific markers

New human glucose transporter protein and nucleic acid encoding the protein, useful in the diagnosis and treatment of disorders associated with aberrant hexose transport.

Claim 1; Fig 2A-D; 48pp; English.

The present sequence represents a human GLUTX polypeptide. GLUTX is a glucose transporter protein. The GLUTX polypeptides and polynucleotides are useful in the diagnosis and treatment of disorders associated with aberrant hexose transport. The GLUTX polypeptide is useful for determining whether a given disorder is associated with aberrant expression of GLUTX or activity of GLUTX. The nucleic acid molecule and the GLUTX polypeptide are useful as diagnostic or therapeutic agents, or they can be used to generate antibodies or identify small molecules that, in turn are clinically useful. The GLUTX nucleic acid molecules are useful for identifying the chromosomal location of GLUTX and as tissue-

//note="Organ: pooled brain, lung, testis; Vector:
pCMV-SPORT6; Site 1: Not1; Site 2: EccRV (destroyed); RNA source anonymous pool of 6 male brains, age range 23-27; l male lung, age 27; and 1 male testis, age 69. Library is oligo-dT primed and directionally cloned (EccRV site is destroyed upon cloning). Average insert size 1.8 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 021. Note: this is a NIH_MGC Library."

GENERAL INFORMATION:

APPELICANT: Anderson et al.

TITLE OF INVENTION: NOVEL PROTEINS AND NUCLEIC ACIDS ENCODING SAME

FILE REPERENCE: 2140-2397

CURRENT APPLICATION NUMBER: US/10/188,186

CURRENT FILING DATE: 2002-07-02

PRIOR APPLICATION NUMBER: 60/360814

PRIOR APPLICATION NUMBER: 60/360814

PRIOR FILING DATE: 2001-09-07
